I build production web applications with Vue, Nuxt, Node.js and Python - from responsive interfaces to APIs and AI-powered workflows - with a visual identity of their own.

CORE TOOLSET

Vue / Nuxt / Quasar / TS - Composition API, SSR, Responsive UI, TypeScript, Quasar, SCSS/CSS

Node / FastAPI / Data systems - REST APIs, Node.js, Python, PostgreSQL, MongoDB, pgvector

AI apps / Three.js / GSAP - LLM integration, Embeddings, RAG, Three.js, GSAP, Interaction

SELECTED PROJECT EXPERIENCE

ARILVO

FULL-STACK / WEB PLATFORM / End-to-end development

- Defined the application architecture and implemented the UI/UX with reusable components.
- Built responsive layouts and custom animations across the platform.
- Handled localization, SEO and deployment.

DOCINTEL

AI / FULL-STACK / Full-stack application development

- Built authentication, document management and an organized workspace with folders, tags and search.
- Connected text extraction and chunking to embeddings and vector storage.
- Implemented summarization and document Q&A with context from previous questions.

ARVAND TERMO TEC

WEB PLATFORM / CMS / Contribution to an existing platform

- Integrated and configured Strapi alongside the content database.
- Refactored existing components and removed unused code to simplify the architecture.
- Improved responsive layouts, localization, navigation and image handling; debugged stability issues.

RAYMAND GROUP

FULL-STACK / Frontend & backend implementation

- Implemented the website frontend with Nuxt and Vue.
- Connected the interface to backend services and application data.
- Worked across implementation, integration and delivery of the business website.
